

Biomaterials for tissue repair.

Journal: Science

Publication Year: 2019

Authors: Karen L Christman

PubMed link: 30679357

Funding Grants: Injectable pro-regenerative scaffold for treating symptomatic peripheral artery disease

Public Summary:

This short review covers a new strategy for regenerative medicine using biomaterials scaffolds. Biomaterial scaffolds can be used to promote tissue repair and regeneration on their own without the need for delivering expensive cells or other therapeutics. This strategy is emerging as a potentially powerful paradigm for regenerative medicine with several examples reaching patients.
